## *Chafer*

### **How to use our chafer:**

#### **Operating tips:**

- ☑ Use only canned sterno fuel in the burner.
- ☑ Fill the water pan with HOT water before lighting the burner.
- ☒ Check the pan occasionally to maintain sufficient water level. Do not use without water!
- ☑ Stainless steel food pans can be used in the oven for cooking.

#### **Setup:**

1. Place the chafer on a stable, level surface, such as a table or counter.
2. Pry the lid from the sterno fuel can and place into the heat cup.
3. Fill the water pan halfway with HOT water.
4. Light the sterno fuel cup with a long match or fireplace lighter. The flame is invisible, but the sterno will light immediately.
5. Allow the water to reach a soft boil before adding the food pan.

#### **Cleaning:**

1. After the sterno fuel cup has gone out, remove the food and water pans carefully – they may still be hot!
2. Scrape and wash the food pan in lukewarm water using mild detergent.
3. Wipe the chafer frame with a wet wash cloth and wipe dry.
4. Please return the used sterno fuel cans so they can be properly disposed.
