Hot Dog Steamer

How to use our hot dog steamer:

Operating tips:

- Only plug the hot dog steamer into a grounded outlet of appropriate volts and amps.

Setup:

1. Place the hot dog steamer on a stable, level surface, such as a table or counter.
2. Remove both lids from the top of the steamer.
3. Remove the hot dog basket, bun basket, partitions, steam baffle, and juice pan.
4. Pour distilled water into the bottom of the heating compartment until the water level is just below the ledge that the steam baffle rests on.
 - Do not fill water above the ledge or you will have soggy buns...no one likes soggy buns.
5. Replace the hot dog basket, bun basket, partitions, steam baffle, and juice pan.
6. Place the hot dogs in the small basket, and the buns in the large basket. Arrange the hot dogs and buns so that there is free circulation of steam.
7. Replace the two lids.
8. Plug the steamer in and flip the switch to ON and set the heat control knob to the desired temperature.
9. Keep the lids closed when not serving.
10. Add more water as necessary to maintain the water level.

Cleaning:

1. Turn the steamer off and allow the liquid to cool.
2. Drain the cooled water from the reservoir.
3. Wipe the inside and outside of the steamer with paper towels.
